

Addi-Ment F

A high-quality water reducing super plasticizer & high workability admixture

Description: -

Addi_Ment F is a high-quality and water-reduction admixture without affecting the setting time of concrete and mortar. It is a brown liquid additive that quickly dissolves in water and is based on naphthalene sulfonates

Usage: -

Add-Ment F is used with all types of cement to achieve the following properties for concrete:

- To achieve highly fluid or self-leveling concrete without compromising compressive strength.
- To produce high-compressive-strength concrete, particularly suited for bridge work, factories, precast concrete, and prestressed concrete.
- To obtain concrete with high early strength, allowing for the removal of formwork in shorter periods.
- To reduce cement consumption without affecting the workability or strength of the concrete.

Advantages: -

- Highly effective plasticizer (without any effect on the setting time of the concrete).
- Efficiently reduces mixing water content without affecting concrete compressive strength.
- Produces self-leveling concrete or mortar.
- Enhances concrete resistance to salts and chemicals.
- Reduces shrinkage and cracking in concrete during the setting process.
- Increases workability and improves the final appearance of the concrete.
- Achieves excellent micro-compressive strength in concrete.
- Chloride-free and safe for use in reinforced concrete.

Characteristics: At 25°

Base	Naphthalene sulfonates
Appearance	Brown liquid
Density	1.18 ± 0.01 kg/l
Chloride content	Nil
Air entrainment	Nil
Compatibility	All types of Portland cement

Application instructions: -

Addi-Ment F is preferably added to concrete during the mixing process or to the mixing water.

Rate of Use :

- The typical dosage is around 0.3 to 0.6% of the cement weight (1-2 kg/m³ of concrete)
- For high-strength concrete, the dosage can be increased to 2-4% of the cement weight, ensuring that the mixing water is not less than the amount required for the full hydration of the cement.
- In all cases, laboratory trial mixes should be conducted to determine the correct ratios that achieve the desired properties.

Safety precautions: -

- Addi-Ments are non-flammable and non-toxic.
- Wash any splashes to the eyes immediately with water.
- For accidental release use an absorbent inert material as sand, then collect up and place in a suitable container.

Packages: -

capacity [20, 200, 1000 kg].

Storage: -

The product should be stored for 12 months in tightly sealed containers and under appropriate storage conditions.
